

Appln. No. 10/071,684  
Amendment dated March 24, 2005  
Reply to Office Action mailed January 11, 2005

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims (deleted text being struck through and added text being underlined):

1           1. (Previously Presented) A cable handling trailer system  
2 comprising:  
3           a trailer having a front end, a back end, and a pair of lateral  
4 sides;  
5           a lifting assembly for lifting a spool of cable onto and off of  
6 the trailer and supporting the spool on the trailer between the front  
7 and back ends of the trailer, the lifting assembly being pivotally  
8 mounted on the trailer; and  
9           cable guiding means for guiding movement of cable onto and  
10 off of the spool in a substantially horizontal orientation between the  
11 spool and the cable guiding means when the spool is supported on  
12 the lifting means, the cable guiding means being mounted on the  
13 trailer rearwardly of the lifting assembly for supporting a length of  
14 the cable in a rearward direction from the spool supported on the  
15 lifting assembly.

1           2. (Original) The system of claim 1 wherein the cable guiding  
2 means comprises:  
3           a guide structure for engaging a portion of cable moving onto  
4 and off of the spool; and  
5           a boom structure mounted on the trailer for supporting the  
6 guide structure, the boom structure being pivotally mounted on the  
7 trailer such that the guide structure is movable along a path  
8 extending generally transverse to an axis of the trailer extending  
9 between the front and back ends of the trailer.

Appln. No. 10/071,684  
Amendment dated March 24, 2005  
Reply to Office Action mailed January 11, 2005

1           3. (Original) The system of claim 2 wherein the boom  
2 structure has a proximal end pivotally mounted on the trailer and a  
3 distal end extending away from the back end of the trailer in a  
4 cantilevered manner.

1           4. (Original) The system of claim 2 wherein the guide  
2 structure comprises first and second rotatable members having  
3 circumferential surfaces positionable adjacent to each other for  
4 moving a portion of the cable positioned between the  
5 circumferential surfaces of the first and second rotatable members.

1           5. (Original) The system of claim 4 wherein the first and  
2 second rotatable members are movable toward and away from each  
3 other such that the circumferential surface of the second rotatable  
4 member is abutable against the circumferential surface of the first  
5 rotatable member.

1           6. (Previously Presented) The system of claim 1 wherein the  
2 lifting assembly comprises:  
3           an elongate pole for extending through a hole in a spool, the  
4 elongate pole having a pair of opposite ends; and  
5           a pair of support arms for supporting the elongate pole, the  
6 elongate pole being rotatably and releasably mounted on each of the  
7 support arms, each of the support arms being pivotally mounted on  
8 the trailer such that the support arms are pivotable between a  
9 transport position and a retrieve position, the transport position  
10 being characterized by the elongate pole being positioned forward  
11 of the back end of the trailer, the retrieve position being  
12 characterized by the elongate pole being positioned behind the back  
13 end of the trailer.

Appln. No. 10/071,684  
Amendment dated March 24, 2005  
Reply to Office Action mailed January 11, 2005

1           7. (Previously Presented) A cable handling trailer system  
2 comprising:  
3           a trailer having a front end, a back end, and a pair of lateral  
4 sides;  
5           a lifting assembly for lifting items into and off of the trailer,  
6 the lifting assembly being pivotally mounted on the trailer; and  
7           control means for controlling the supply of power from a  
8 power source to the lifting assembly, the control means including a  
9 housing for mounting at least one control thereon, the housing is  
10 movably mounted on the trailer to permit swinging movement of the  
11 housing between a storage position at a first location and an  
12 operational position at a second location.

1           8. (Previously Presented) The system of claim 7 wherein the  
2 second location of the operational position is characterized by a  
3 portion of the housing extending rearwardly of the back end of the  
4 trailer and the first location of the storage position is characterized  
5 by the housing being positioned above the trailer.

1           9. (Previously Presented) The system of claim 7 wherein the  
2 control means further comprises a pivot mount pivotally connecting  
3 the housing to the trailer and having a pivot axis about which the  
4 housing swings between the first location and the second location.

1           10. (Original) The system of claim 9 wherein the control  
2 means further comprises a pivot arm extending between the pivot  
3 mount and the housing for spacing the housing from the pivot axis  
4 of the pivot mount.

11. through 14. (Cancelled)

Appln. No. 10/071,684  
Amendment dated March 24, 2005  
Reply to Office Action mailed January 11, 2005

1           15. (Previously Presented) A cable handling trailer system  
2 comprising:  
3           a trailer having a front end, a back end, and a pair of lateral  
4 sides;  
5           a lifting assembly for lifting items into and off of the trailer;  
6 and  
7           a level winding assembly for guiding cable winding onto a  
8 spool when the spool is mounted on the lifting assembly, the level  
9 winding assembly including a swing structure located on the trailer  
10 rearwardly of the lifting assembly, the swing structure being  
11 pivotally mounted on the trailer for pivot movement about a  
12 substantially horizontal axis to produce lateral movement of the  
13 swing structure in a substantially vertical plane transverse to the  
14 trailer.

1           16. (Previously Presented) The system of claim 15 wherein  
2 the level winding assembly comprises:  
3           a base structure for removably mounting on the trailer, the  
4 swing structure being pivotally mounted on the base structure; and  
5           a swing actuator structure for pivoting the swing structure  
6 with respect to the base structure.

1           17. (Original) The system of claim 16 wherein the swing  
2 structure comprises:  
3           an arm having a lower end pivotally mounted on the base  
4 structure and an upper end;  
5           a head portion mounted on an upper end of the arm, the head  
6 portion having a plurality of rollers formed into a U-shaped  
7 configuration with an open top.

18. through 20. (Cancelled)

1        21. (Original) A cable handling trailer system comprising:  
2        a trailer having a front end, a back end, and a pair of lateral  
3        sides;  
4        a lifting assembly for lifting items into and off of the trailer,  
5        the lifting assembly being pivotally mounted on the trailer; and  
6        a driving mechanism for controlling rotation of the spool, the  
7        driving mechanism comprising:  
8                spool engaging means for engaging at least one of the  
9                outer discs of the spool to rotate the spool; and  
10               supporting means for supporting the spool engaging  
11               means on the trailer.

1        22. (Original) The system of claim 21 wherein the spool  
2        engaging means comprises:  
3                a pair of laterally spaced wheels, each of the wheels having a  
4                circumferential surface for engaging a circumferential edge of one  
5                of the outer discs of the spool;  
6                a rotator axle rotatably mounted and having the laterally  
7                spaced wheels mounted thereon such that the laterally spaced wheels  
8                rotate with the rotator axle;  
9                a braking means for braking rotation of the rotator axle and  
10               the laterally spaced wheels; and  
11               a motor coupled to the axle for rotating the rotator axle in two  
12               directions of rotation.

Appln. No. 10/071,684  
Amendment dated March 24, 2005  
Reply to Office Action mailed January 11, 2005

1           23. (Original) The system of claim 21 wherein the supporting  
2 means comprising:

3           a pivotal axle mounted on the trailer in a manner permitting  
4 pivot rotation of the pivotal axle about a longitudinal axis of the  
5 pivotal axle;

6           an upright member mounted on the pivotal axle and extending  
7 outwardly from the pivotal axle in a direction substantially  
8 perpendicular to the longitudinal axis of the pivotal axis,

9           an actuating member having a first end and a second end, the  
10 first end of the actuating member being coupled to the trailer and  
11 the second end of the actuating member being coupled to the upright  
12 member; and

13          a pair of bars, each of the bars being elongate and having a  
14 first end and a second end, the first ends of the bars being coupled  
15 to the pivotal axle and the second ends of the bars being coupled to  
16 the rotator axle.

1           24. (Previously Presented) The system of claim 1  
2 additionally comprising means located on the front end of the trailer  
3 for hitching the trailer to a vehicle so that the trailer is towable by  
4 the vehicle.

1           25. (Previously Presented) The system of claim 1 wherein the  
2 cable guiding means is pivotally mounted on the trailer to pivot  
3 about a substantially vertical axis and permit lateral movement of  
4 the length of cable in a substantially horizontal plane.

26. through 27. (Cancelled)

Appln. No. 10/071,684  
Amendment dated March 24, 2005  
Reply to Office Action mailed January 11, 2005

- 1           28. (Previously Presented) The system of claim 7 wherein  
2 the first location of the storage position is further characterized by  
3 the housing being positioned over the trailer, and the second  
4 location of the operational position is further characterized by the  
5 housing being positioned at a location that is not above the trailer.
